Department of Computing and Mathematical Sciences

Texas A&M University-Corpus Christi

Corpus Christi, Texas 78412

This tutorial will demonstrate how to access databases using Perl's DBI module. Participants are expected to be somewhat familiar with Perl and programming in general. (The Introduction to Perl Tutorial should be sufficient introduction to the Perl language for this tutorial.) Topics will include connecting to databases such as Oracle and MySQL, executing queries, retrieving results, and executing SQL commands from a Perl program.
